

Barracuda Networks Launches Barracuda SSL VPN 680 for Enterprises and Large Organizations

New Barracuda SSL VPN Model Supports up to 500 Concurrent Users in a Single Unit

CeBIT 2009, Hannover, Germany, March 4, 2009 – (Hall 11 Stand B50) – Barracuda Networks Inc. today launched the Barracuda SSL VPN 680, the newest addition to the Barracuda SSL VPN product line. The Barracuda SSL VPN 680 supports up to 500 concurrent users, effectively serving organizations with thousands of users.

“The benefits of SSL VPN technology have gone largely unrealized due to the high price and complexity associated with most solutions on the market,” said Stephen Pao, vice president of product management for Barracuda Networks. “With the Barracuda SSL VPN 680 we are breaking price and performance barriers for the enterprise and leveraging the simplicity of Barracuda Networks appliance deployment model.”

The Barracuda SSL VPN 680 uses existing SSL capabilities built into every modern Web browser, making user access as simple as browsing the Internet. The intuitive Web user interface makes it easy for administrators to monitor and maintain, as well as to provide granular access for greater control over individual resources. In addition, the Barracuda SSL VPN 680’s straightforward user portal allows users to view what resources are available unlike a traditional VPN which assigns a user an IP address on the network and then leaves it up to the end user to figure out what resources they are allowed to access.

About Barracuda SSL VPN

The Barracuda SSL VPN is an integrated hardware and software solution enabling secure, clientless remote access to internal network resources from any Web browser. Designed for remote employees and road warriors, the Barracuda SSL VPN provides comprehensive control over file systems and Web-based applications requiring external access. The Barracuda SSL VPN integrates with third-party authentication mechanisms to control user access levels and provides single sign-on.

The Barracuda SSL VPN also uses Barracuda Energize Updates, and is continuously updated with the latest virus and application definitions every hour keeping maintenance to a minimum and eliminating administrative overhead. Updates are provided by Barracuda Central, an advanced 24x7 security operations center that works to continuously monitor and block the latest Internet threats.

About GEOBRIDGE

Since 1997, GEOBRIDGE (www.GEOBRIDGE.net) has been providing information security solutions to global clients. Today our client list includes Fortune 500 companies, financial institutions, health care, government agencies and defense clients across North America and internationally. GEOBRIDGE helps clients mitigate risk and realize significant value from their IT investments while allowing clients to focus on the growth and profitability of their company. Our team provides solutions, integration services and consultancy in the areas of encryption, network security, identity management, transaction security, and compliance. Due to the increased needs for compliance with internal governance, and external legal and regulatory requirements, we have expanded our compliance and security best-practices offerings to address information assurance. GEOBRIDGE is a Qualified Security Assessor company (QSAC) certified by the Payment Card Industry (PCI) and a TG-3 Assessor recognized by the Electronic Funds Transfer (EFT) networks.
