Procom SecureLogin™ Password Management Suite Overview

Password Management

SecureLogin Single Sign-On

Takes the headache out of repetitive logins, by providing simple and secure access to published applications with just one password

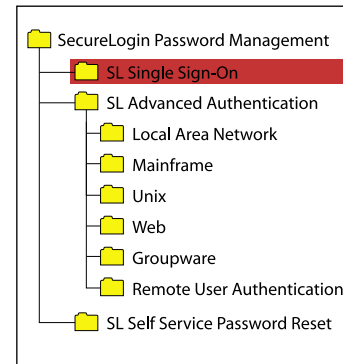

- The Challenge is...**
- Password management costs are skyrocketing
 - Employees use weak passwords that do not comply with your security policy.
 - You are responsible for implementing enterprise-wide single sign-on. You want a solution for client-server, mainframe and internet single sign-on

The solution is Procom SecureLogin Single Sign-on.

- Provides single sign-on to virtually all Windows, Java, custom, mid-range and mainframe applications as well as intranet and internet sites
- Detects password expiry and generates random replacements that conform to your security policy saving time, reducing the hassle and enhancing security.
- Speeds up the sign-on process and enforces compliance to password security policy.
- Implement SecureLogin and deliver client-server, mainframe and internet single sign-on

Procom understands that...

- You need a single sign-on solution that works in harmony with your environment
- You want to eliminate costly password management for your staff, so they can get on with business
- You want effective and efficient deployment
- You want minimal user impact and minimal additional training
- Your employees have better things to do than login.
- Your security help desk has more important things to do than reset passwords

Combined end user and administration costs related to password use/maintenance can reach US\$385/user/year. (Gartner Group)

SecureLogin Advanced Authentication

Uses smartcards, tokens or biometric devices to provide strong authentication to your network resources

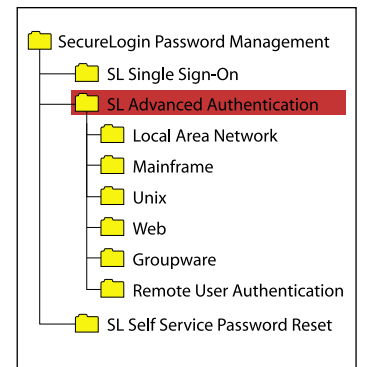

- The Challenge is...**
- There is a need for strong authentication in today's business environment
 - Shared and weak passwords compromise your ability to identify who is using your systems

The solution is Procom SecureLogin Advanced Authentication.

- Streamline access to corporate resources
- Positively identify users accessing your systems
- Securely extend access to corporate applications over the internet
- Deliver a flexible authentication architecture that can support multiple strong authentication hardware and software products

Procom Understands that...

- You need strong authentication to your corporate system including the mainframe and web-based applications
- Strong authentication is the foundation for transaction and interaction accountability.
- Strong authentication is a business enabler
- You need an advanced authentication infrastructure that is hardware agnostic and capable of supporting a variety of advanced authentication devices

57% of security breaches were made by on-site employees/contractors accessing unauthorized resources. (eWeek)

SecureLogin Self Service Password Reset

Provides an easy and cost effective method for user's to reset their forgotten network password without having to contact the help desk

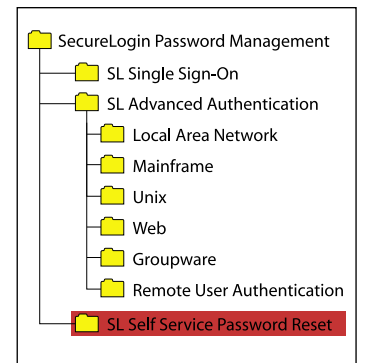

- The Challenge is...**
- Password management costs are increasing
 - Password reset costs are a significant part of password management
 - Employees are often frustrated when they have to call the help desk to reset passwords
 - To automate password resets while ensuring accountability.

The Solution is Procom SecureLogin Self Service Password Reset

- Maximize savings by eliminating password reset calls to the help desk
- Increase employee productivity by allowing them to reset their own network password without calling the help desk

Procom Understands that...

- You benefit from leveraging information captured during a single sign-on implementation. Single sign-on passphrases are corporate assets and are the key to self service password reset
- You want a password management tool that can be managed through your existing network management interfaces
- Your help desk has more important things to do than reset passwords

It costs an organization US\$27 – 56 each time an employee calls the Help Desk. (Giga)
