Protocom SecureLogin™

Advanced Authentication

Strong authentication to your network resources

An advanced user identification solution enhancing security to your enterprise network

Reasons to choose SecureLogin Advanced Authentication

Enhanced Security

SecureLogin Advanced Authentication absolutely and consistently enforces your system security policy.

How you benefit:

- Speeds up and simplifies the sign-on process.
- Eliminates the need for less secure authentication methods.
- Eliminates shared and weak passwords which compromise the security of your network.
- Positively identify users by who they are, or what they have, rather than what they know.

Protocom Understands that:

- Your employees have better things to do than login.
- You are concerned about your employees using obvious passwords, or sharing passwords.
- Strong authentication is the foundation for transaction and interaction accountability.

Works with your people

SecureLogin Advanced Authentication fits your workplace

How you benefit:

- SecureLogin Advanced Authentication is easy to use, even by the most inexperienced user in your workforce.
- Easily Integrates with SecureLogin Single Sign-On to provide secure, reliable and efficient authentication.
- Allows for integration of a One Time Password (OTP) solution.

Protocom Understands that:

- You want an advanced authentication solution that your staff and administrators enjoy and rely on no matter where they work.
- You want an advanced authentication solution that is as flexible as your work force.
- You need strong, secure, yet easy to use authentication to your corporate systems including mainframe and Unix systems.

Flexible

How you benefit:

SecureLogin Advanced Authentication works in your environment

- Extremely reliable, robust and scalable, allowing you to leverage your existing infrastructure investment.
- Highly configurable and integrates with your existing systems and network.
- Can provide a secure remote dial-up connection to your network.
- Flexibility with a single piece of software that supports two factor authentication using biometrics and smart cards.
- Flexibility in security level - Configurable so that a login requires one or two methods of authentication.

Protocom Understands that:

- There is a need for strong authentication in today's business environments
- You need flexibility as your needs evolve
- You need an advanced authentication solution that works in harmony with your environment
- You need an advanced authentication infrastructure that is capable of supporting a variety of advanced authentication devices.

Powerful and Flexible Authentication Choices

Network Security & Innovation
